

Research That Matters

Cooperative Research, a unit of Rutgers New Jersey Agricultural Experiment Station (NJAES), focuses on innovative approaches to generating and transferring knowledge and technology throughout New Jersey. Through 19 centers, institutes, and off-campus stations located throughout the state, Cooperative Research aims to provide solutions that:

- Support our rich and diverse agricultural tradition
- Help farmers, fisheries, nurseries, food processors, and agribusinesses cope with complex technical and regulatory issues
- Sustain and preserve our unique ecosystems and natural resources
- Enhance the quality of life for New Jersey's diverse populations

Research funded by NJAES addresses issues related to agriculture and food systems; environmental and natural resource systems; food, nutrition, and health; and human and community development.

Research developments, findings, and technologies are distributed a number of ways, including via educational and training programs, technology transfer, policy recommendations, publications, and the formation of spin-off companies. This process represents an ongoing statewide effort to improve the quality of life of New Jersey's inhabitants, while sustaining and improving its thriving agricultural, environmental, and financial systems.
