

## Who We Are and What We Do

Students at the Rutgers School of Environmental and Biological Sciences are part of a rich history of excellence in learning, innovation, service, and community. The school builds on a well-established tradition of offering professional and pre-professional curricula complemented by hands-on learning and extracurricular experiences.

- Our courses cover the biological spectrum, from organisms to ecosystems.
- All programs are based on a foundation in the physical and biological sciences, but also emphasize the social and human dimensions of scientific practice in majors such as environmental and business economics or environmental policy, institutions, and behavior.
- Students often pursue groundbreaking research projects, internships, and service learning opportunities—all of which are hallmarks of an education at one of the top public research universities in the nation.
- Graduates go on to pursue graduate and professional programs at some of the nation's most prestigious universities, and they become leaders in their fields.

We foster an environment that encourages leadership and values individuals. Our integrated teaching, research, and outreach programs offer students a complete and well-rounded education both in and out of the classroom—an education that prepares students for employment and citizenship in an increasingly interrelated global community. And with a location in the middle of it all—just one hour from New York City, 90 minutes from Philadelphia, and one hour from the Jersey shore—our students have the best of all worlds.
